## Cabinet Adaptor Kit for Hewlett Packard Cabinet

Digitus offers a wide range of adaptor kits for cabinets that aren't designed for swing-handles. The kits allow any Digitus Smart Handle to be used on these cabinets without modifications to the cabinet.

HPE data center cabinets come in a variety of different latching options. One of the more popular versions uses a vertically mounted C2 latch (dbVC2KIT-SH) on the front door and a rotary style latch on the split rear doors. Digitus provides adapter kits for both of these door configurations for all of their handle types.
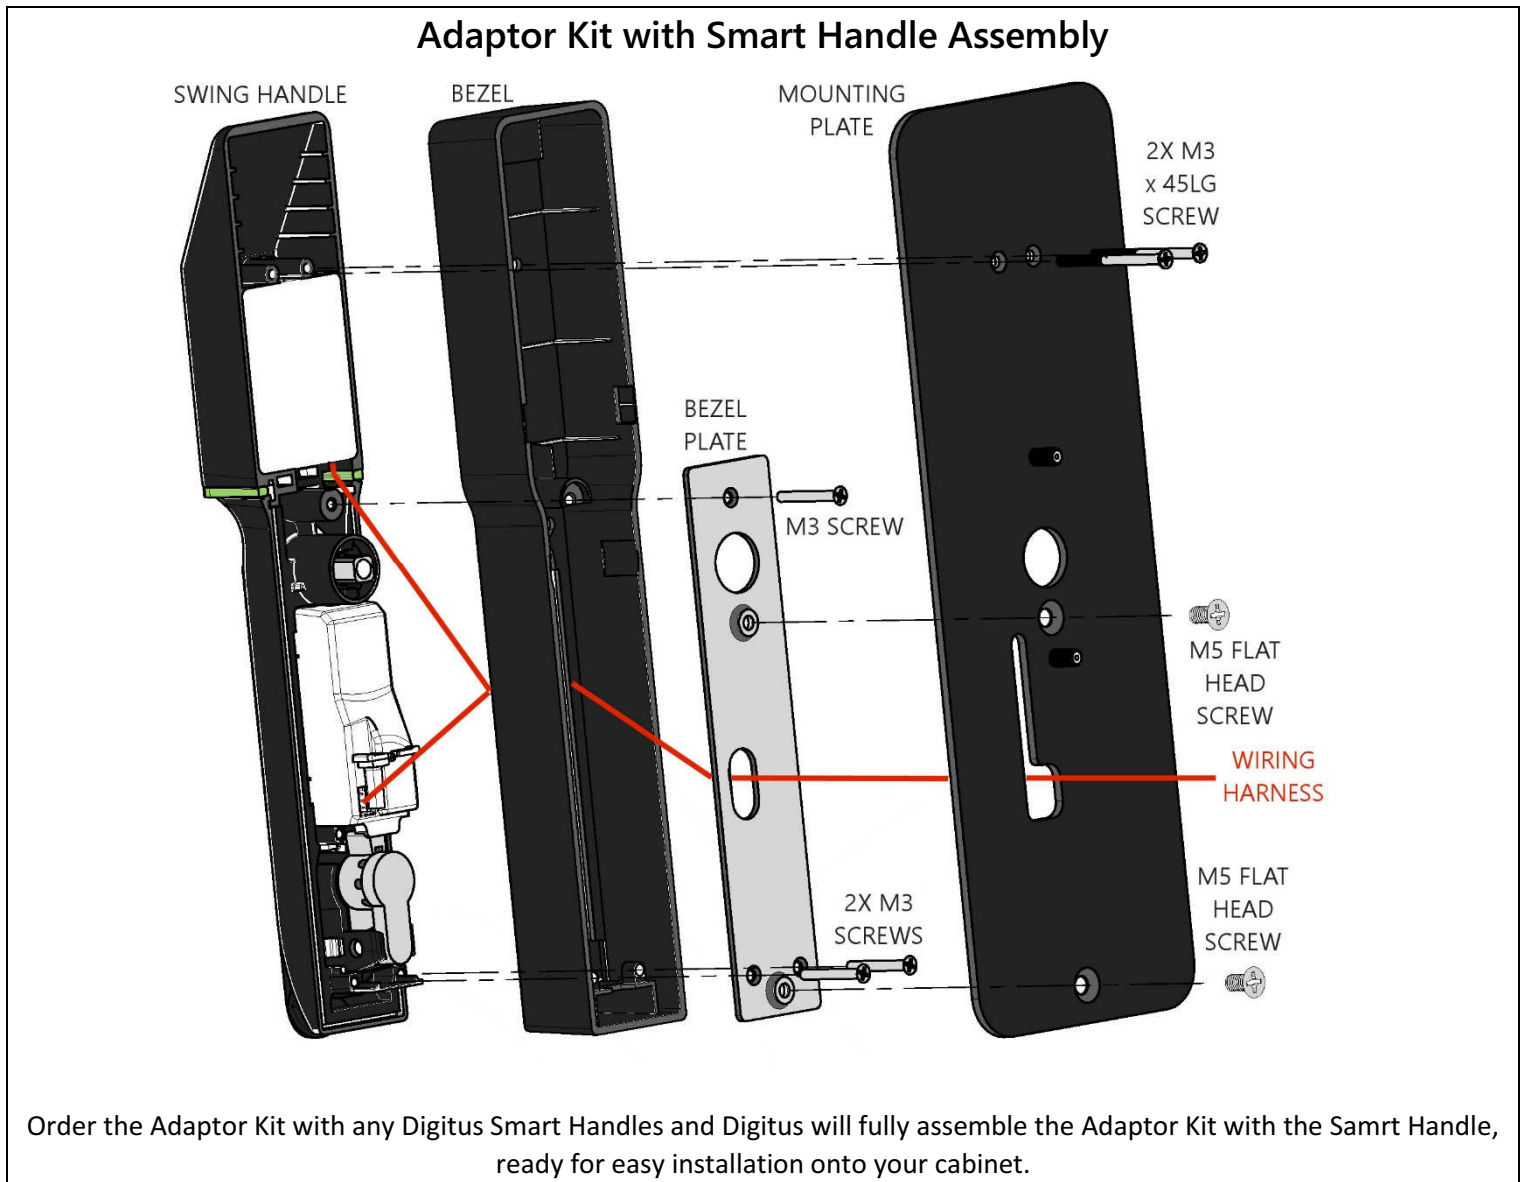

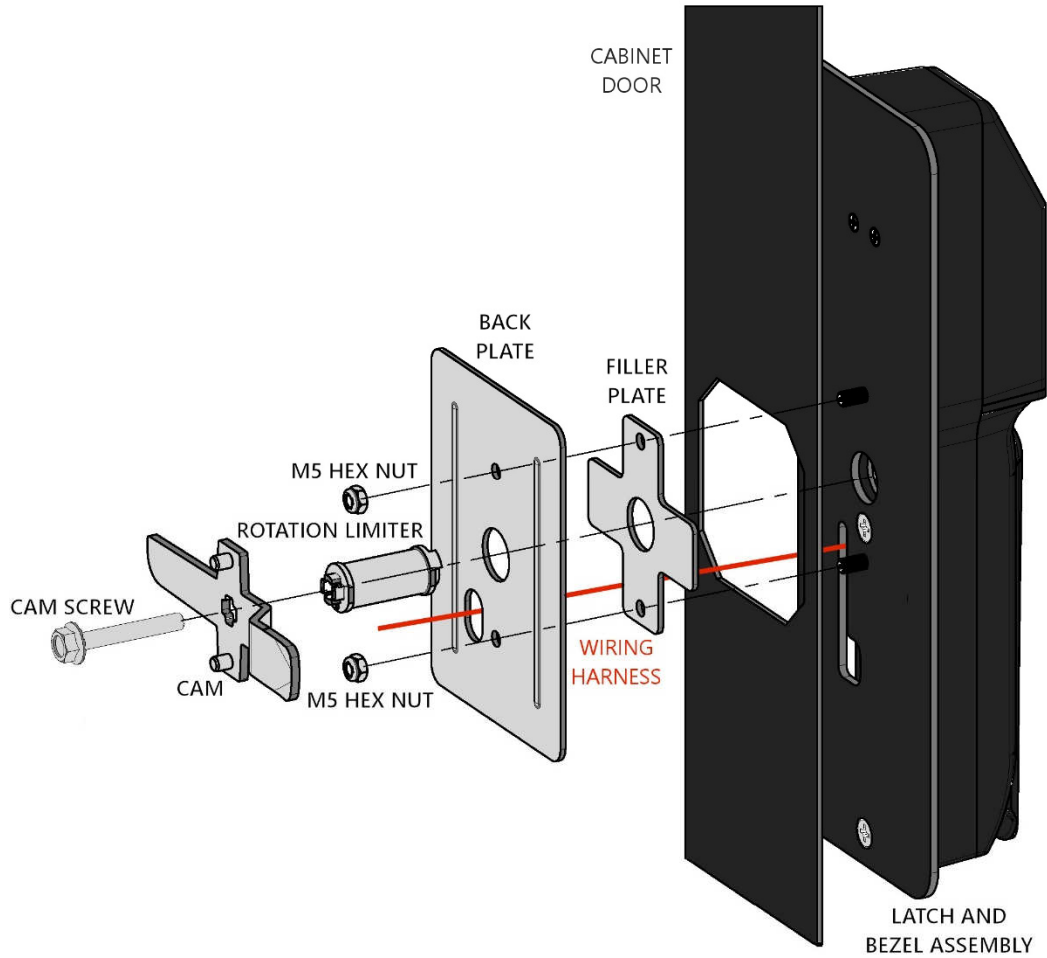

Before	After

Designed specifically for a HP cabinet with a split rear door with the round / rotary handle, the Digitus dbHPKIT-R-SH cabinet adaptor kit makes use of existing mounting holes and openings to seamlessly provide an electronic handle solution.

Adaptor Kit with Smart Handle Assembly
