

Cabinet Adaptor Kit for Left Hinged/Curved Rittal Cabinet

Digitus offers a wide range of adaptor kits for cabinets that aren't designed for swing-handles. The kits allow any Digitus Smart Handle to be used on these cabinets without modifications to the cabinet.

Rittal enclosures traditionally use the Comfort Handle that operates a flat slide bar to latch the doors. The Comfort handles are sometimes mounted on a bevel portion of the door which requires an additional spacer piece to offset the bevel. If a bevelled kit is required, we will need to know if the handle is mounted on the right or left side of the door.

Before

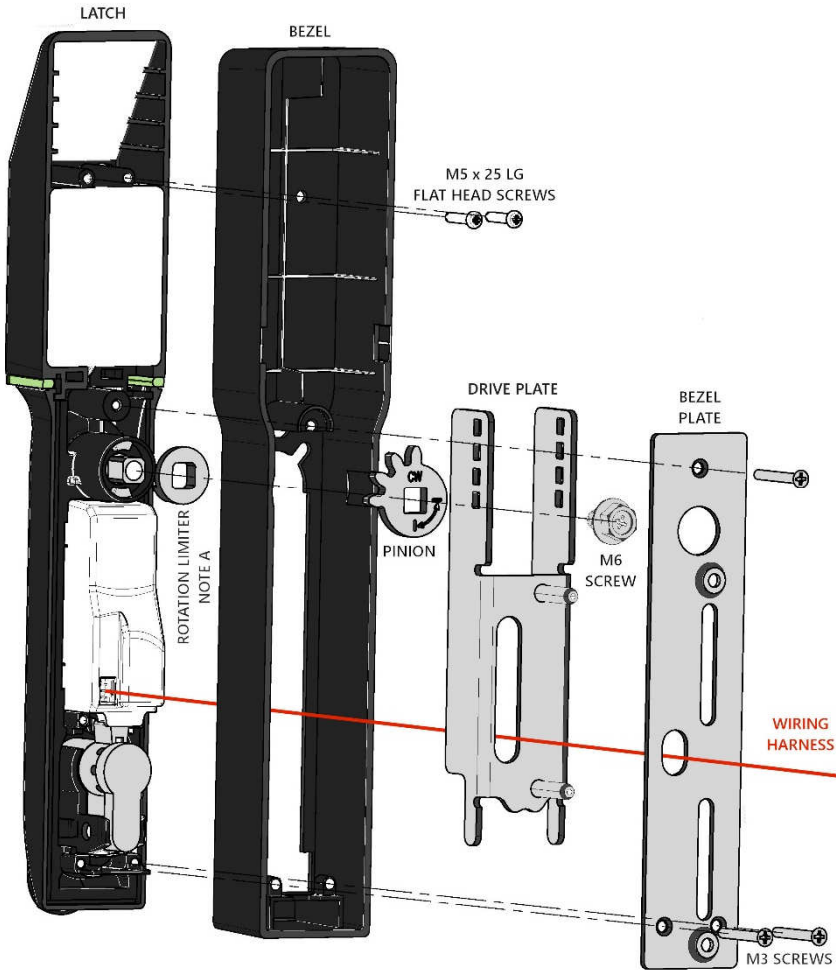

After

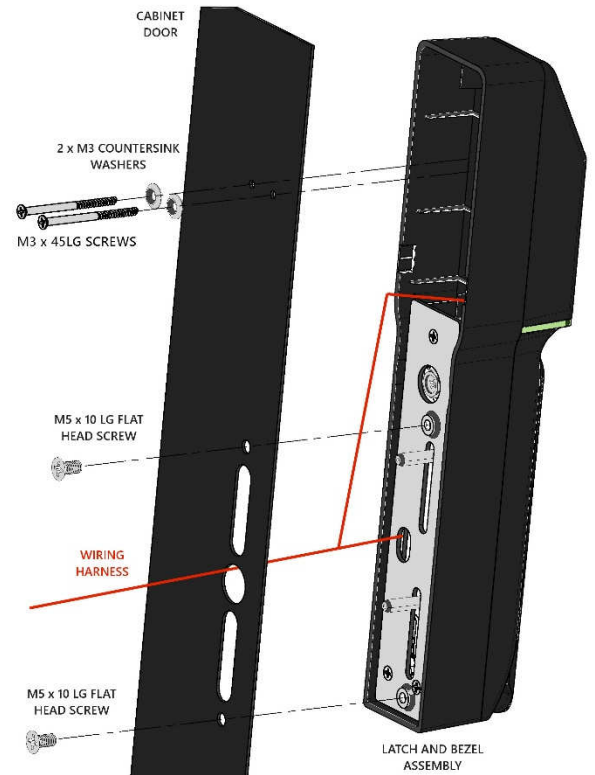

Designed specifically for Rittal Cabinets with bevelled front doors that have their hinges on the left, the Digitus dbRITKIT-SH-LHC makes use of existing mounting holes and openings to seamlessly provide an electronic handle solution.

Adaptor Kit with Smart Handle Assembly

Order the Adaptor Kit with any Digitus Smart Handles and Digitus will fully assemble the Adaptor Kit with the Smart Handle, ready for easy installation onto your cabinet.

Adaptor Kit Installation

The fully assembled Adaptor Kit ready to be installed. All assembly hardware is included.
